

Save Time While Meeting Federal IT Compliance Requirements

Centralize your IT compliance program into a single system that can help you attain authorizations needed for federal contracts.

Streamline your compliance efforts in a FedRamp and DOD-authorized environment to help your organization maintain essential federal government contracts and avoid revenue loss. Achieve greater efficiency, scalability and visibility by automating your security compliance program from a centralized and secure single source of truth.

Diligent has a dedicated team of consultants focused on key IT compliance frameworks required by government agencies, so you can quickly build a security compliance program for FedRAMP, CMMC, NIST 800-171, FISMA, NIST 800-53, DFARS and more.

Why Choose Diligent **IT Compliance** for Federal Contractors?

- **Deliver deep visibility** into your IT compliance program with ready-to-use visualizations and executive dashboards on Diligent 360 that enable low effort, data-driven decision-making
- **Increase efficiency** by building controls once and using them to obtain multiple security certifications
- **Scale up** to cover additional frameworks that open new revenue opportunities with the U.S. federal government
- **Boost morale and save time** by replacing repetitive, manual efforts with automated surveys, remediation and centralized evidence collection for audit-readiness

“Using Diligent’s HighBond platform, we developed a common controls framework that included more than 3,000+ global security certifications. Diligent’s unified platform allowed for a standardized set of controls and the ability for the organization to align controls with central policies and procedures.”

— Information Security Leader, Large U.S. Technology Company

\$5.6M

The average cost of a data breach, with lack of IT compliance being the top cost amplifying factor.

38%

38% of the average total cost of a data breach is related to lost business, making the loss of contract revenue one of the most significant risks faced by federal contractors.

Highlighted Features

Automated workflows and compliance management

- Ensure IT compliance in less time by deploying pre-configured content that maps regulations to controls
- Leverage automated workflows that democratize evidence collection and issue remediation to control owners
- Use continuous monitoring to automate testing of process areas, such as user access testing and segregation of duties, freeing up time for strategic projects
- Complete initial authorization, re-certification and auditing in one centralized platform
- Use customizable SSP report export for FedRAMP and FISMA authorization packages

Powerful reporting and deep visibility

- Demonstrate a robust and continuously monitored compliance posture against key global IT and information security standards, including those required for U.S. federal contracts
- Deliver a centralized, aggregated view of your entire IT compliance program for streamlined security certification attainment
- Equip the board and C-suite with the meaningful insights and visibility they need to stay ahead of threats and make data-informed decisions
